FOR IMMEDIATE RELEASE

Automated Solutions Group Announces the Availability of AreaList Pro 8.0

Huntington Beach, CA – October 17, 2007: Automated Solutions Group announced release of AreaList Pro 8.0 for 4D 2003/2004 and 4D v11!

"ASG is one of the first companies to bring their full product line compatible with 4D v11 SQL," said Brendan Coveney, president and CEO of 4D Inc. "There are few companies who make a more versatile range of tools for the 4D developer, and AreaList Pro is a great example of their work. After nearly two decades of dedicated service to the 4D community, it's almost impossible to imagine a 4D world without ASG's products."

What is AreaList Pro?

AreaList Pro is a Universal Binary plug-in for 4th Dimension that provides editable scrolling lists directly on your 4D applications forms. It equips you with the necessary tools to develop lists quickly and with increased flexibility. All features can be developed programmatically with AreaList Pro's extensive developer API.

"By far the best upgrade to AreaList Pro ever!" says Jeff Kain, Executive Vice President and Co-Founder Orchard Software Corporation

AreaList Pro gives you the ability to display fields or arrays, providing a full-featured interface for creating enhanced output forms or complex scrolling lists. Using fields gives you speed because only the currently displayed records need to be loaded from disk. It also eases development by eliminating the need for any intermediate data structures.

For greater flexibility, AreaList Pro's ability to display standard 4th Dimension arrays, you have total control over the displayed data – including interfaces which communicate with external data sources (such as SQL connectivity). And for those times when you need speed and flexibility, calculated columns may be used when displaying fields.

AreaList Pro 8.0 provides the ability to easily create interfaces which for web based applications, including complete support for creating standard HTML tables, interfacing with Java Applets, and producing standard XML documents.

What's New in ALP 8.0?

- * Native support for 4D 2004 and 4D v11 (Universal Binary)
- * New Windows Vista Interface Support
- * Expanded row support (4 million rows)
- * New ALP QuickPop Interface
- * Over 40 new or enhanced routines
- * Optimized drawing for precise area object sizing
- * New Edit Menu Callback Interface
- * New Event Callback Interface
- * Enhanced Enterability Features (supports custom entry dialogs)
- * Complete RGB Configuration (rows, columns, cells)
- * New live scroll and wheel mouse support
- * Drop-In compatible with Foundation based applications (requires PowerTools)
